

September 16, 2011

Dear Doctor,

Thank you for attending the 16<sup>th</sup> annual Symposium in the Ozarks. As always, we hope you will find today's presentation full of pertinent and timely information to integrate in your practice over the coming months.

It is our continuing goal, under the umbrella of our Optometric Co-management Program, to be a resource for you in your practice not only through today's symposium, but throughout the year as well. From just a question for one of our ophthalmologists to a referral of patients for diagnostic testing or surgery, our team of ophthalmologists are committed to being a resource for you in your delivery of patient care.

It seems each year marks growth in our practice or advances in technology which allow us to enhance even further the quality of care we are able to deliver patients. We are particularly pleased to share with you Dr. Chad Betts' and Dr. Brad Talley's continuous advancements in the field of medical diseases of the retina and vitreous, including intravitreal injections. As well, Dr. Talley's glaucoma practice continues to refine the medical and surgical treatment of patients with advanced glaucoma. In the area of technology, we are introducing access to new technology related to vision improvement at the neuro-sensory level. We have already seen this technology bring benefit to amblyopic patients and post refractive patients in particular. Finally, we continue to see advances and refinements in technology related to achieving the most consistent optimal outcomes for premium channel patients.

In your symposium notebook, you will find sections with contact information for various departments at McDonald Eye Associates as well as those introducing certain personnel involved with co-management of refractive and cataract surgery patients. Please feel free to contact any of these associates if they can be of service at any time. You can also access the content of this notebook on your computer or portable device by visiting the Referring Doctors section of our website at [www.mcdonaldeye.com](http://www.mcdonaldeye.com). The username is mcdonaldeye and the password is thankyou.

Also, before you leave today, please take a moment to fill out the symposium survey as your feedback is very valuable in planning for future symposiums.

Sincerely,

J. E. "Jay" McDonald II, M.D.  
McDonald Eye Associates

Chad Betts, M.D., R.Ph.  
McDonald Eye Associates

Experience. Care. Innovation.
